Spring Flowering Bulbs and Plants

GIANT DARWIN TULIPS

The most popular of all tulips! The chief characteristics of the Darwin tulips are the **perfect cup-shape** of the flowers, the **fleshy substantial petals**, **tall stems** and **bright colors**. They bloom in May, and in coloring embrace almost every conceivable shade of pink, almost jet black, crimson, scarlet, purple to mauve, and other rare tints. **We offer first size, 11 to 12 centimeter bulbs.** Plant about 5 inches apart and 5 to 6 inches deep. Protect all tulips with leaves over winter. Figures indicate height in inches. For indoor culture, plant several to a pot, water them well and place in a cool, dark cellar for six weeks. Then bring upstairs.

Salzer's Early Tulips

SINGLE

Salzer's single, early tulips are the very earliest to bloom, commencing to flower in April. The stems are quite tall, although not quite as long as those of the May flowering types, the length of stem being sacrificed for extra earliness. The flowers, however, are as large and the colors equally as wonderful. For the very earliest tulips next spring, this Single Early type is the one to plant. The massive blooms are of good heavy substance and brilliantly colored. Tulips should be planted from October to December, so that the tops are 5 inches below the surface, and about 5 inches apart. The figures after each variety indicate the height in inches. Tulips should be protected with peat, or with leaves or straw, over winter. Prices include postage. We offer first size, 11 to 12 centimeter bulbs, Holland grown.

When stem roots appear above the bulb, keep adding more soil as a top dressing for these roots to feed upon. Until the roots have been thoroughly developed, keep in a cool place and covered with straw. After about a month, bring into a temperature of 66 degrees, let the plants grow slowly under a bench or table till 6 inches high, then place on top of bench in full light.

Verified Seed in all our Common Alfalfa.

A field will last a life time and no amount of cold will kill it. It roots deeply. Easily eradicated. It makes the finest quality hay. It withstands extreme wet and severest drought.

A Beautiful Field of Medium Red Clover

MEDIUM RED CLOVER

For Fall Sowing or Buy Now for Next Spring!

Medium Red, the most important clover, lives two years or more, grows about two feet high and makes two crops a year, yielding about three tons of cured hay per acre. Clover hay is very nutritious, stock fed on it requiring less grain.

Sow 15 lbs. per acre. Our Radium Brand Clover is among the finest obtainable. It is our best grade, and tests around 99% in purity; the most of it is 99½% or better, and it is free from noxious weeds. Our Superior Brand tests about as high, free from noxious weeds, but it is not quite as fancy in appearance. Wisconsin and Minnesota grown. Bags free.

SAND VETCH

Often called Hairy Vetch because of its downy or hairy stems and also called Winter Vetch, as when sown in the fall, it lives through the severest winter. Planted in spring, it makes its full growth in the same year, and then does not winter through.

It will do well on poor land, and especially on sandy land, enriching it more than any other crop. Inoculate before planting. Sow 50 pounds with one bushel grain, preferably Oats, Barley or Rye. Drill in 1 to 2 in. deep. Sow from early spring until September. 4727—Radium Brand: 2 lbs., \$1.00; 5 lbs., \$2.28, postpaid to 4th zone. Not prepaid: 10 lbs., \$3.40; 25 lbs., \$7.55; 50 lbs., \$14.45; 100 lbs., \$28.00. Bags free.

SAND VETCH AND WINTER RYE FOR HAY OR PASTURE

Just the thing you have been looking for. A rich pasture or a bountiful hay crop! It is secured by sowing our mixture of Sand Vetch and Winter Rye. The method of culture is simple. Plow and harrow your field carefully and then seed at the rate of 70 lbs. of our mixture per acre, covering the seed about 2½ inches. In about six weeks it is ready for pasture, or in nine weeks it makes excellent hay. 4676—PRICE OF SAND VETCH AND WINTER RYE MIXTURE: 70 lbs. (enough for one acre), \$6.50, not prepaid.

DWARF ESSEX RAPE

Sow in July, August and September. It grows well during the cool, moist weather and is ready for pasture in six to eight weeks. It is eaten by all stock; hogs and sheep are especially fond of it. Sow in drills 2 to 3 lbs., or broadcast 5 lbs. per acre. 4666—Radium Brand: 2 lbs., 88c; 5 lbs., \$1.88, postpaid to 4th zone. Not prepaid: 25 lbs., \$6.75; 50 lbs., \$12.85; 100 lbs., \$25.00. Bags free.

REED'S CANARY GRASS

Or Phalaris. A grass for wet, low-lying, poorly drained soils—in fact, the only grass we know of for reclaiming waste, marshy lands. Underground stems will form a tough sod, and hold hay machinery. Yields up to 4.57 tons of hay per acre from two cuttings. Sow 5 to 6 lbs. per acre, or drill in 2 to 3 lbs. per acre in 18-in. rows. 4511—Lb., 75c; 2 lbs., \$1.38; 5 lbs., \$2.95, postpaid to 4th zone. Not prepaid: 10 lbs., \$5.00; 25 lbs., \$12.10; 50 lbs., \$23.45; 100 lbs., \$46.00. Bags free.

A Fine Stand of Rosen Winter Rye

ROSEN WINTER RYE

Winter Rye one of the most valuable crops for all sections of the country, and it can be depended upon more than any other grain to always produce a good paying crop everywhere. Winter Rye is the best plant for green manuring on poor soils where clover will not grow. It is plowed under about ten days before ripening time so as to get all the growth possible before turning it under. Sow at the rate of $1\frac{1}{2}$ bushels per acre and cover about one inch deep. The kernels of Salzer's Rosen Winter Rye usually run considerably larger than other ryes. It is unexcelled for flour purposes. Produces more flour per bushel. Has short, stiff straw. Does not easily lodge. Has a greater leaf surface. Has long, large, well filled heads. Kernels unusually plump. 4673—5 lbs., 85c, postpaid to 4th zone. Not prepaid: 25 lbs., \$1.75; bu. (56 lbs.), \$3.10; $2\frac{1}{2}$ bu., \$7.65; 5 bu., \$15.20. Bags free. All prices subject to change. See footnote on page 14.
